[GUIDE] How to Transfer Death Stranding Save Files from Epic Games(or any other non-steam version) to Death Stranding: Director's Cut (Steam) .

Bug / Issue

No mods, no cheats, no third-party apps. A working manual method to load old Epic saves into the Steam Director's Cut version. Requires basic HEX editing and must be done offline during the first load. This method helped me, so i hope it will help you aswell.

1. Backup your. exe file

•Go to the game folder: C:\Program Files (x86)\Steam\steamapps\common\Death Stranding Director's Cut
•Copy the ds. exe (or similarly named) file to safe location, like your Desktop. • Do not rename it, just keep a backup in case something goes wrong.

2. Extract your Epic Games/Gamepass save files

• Find the original saves here: C:\Users<YourUsername>\Saved Games\KojimaProductions\DeathStranding\

•Copy all files to a temporary folder (e.g., on your Desktop). • Delete any of the following if present: steam_autocloud.vdf, steamcloud.vdf or any cloud_something

3. Edit the .exe in a HEX editor

• Use Notepad++ with a HEX plugin or HxD. • Open ds.exe in HEX mode. • Find this byte sequence:

75 05 41 C6 46 3A 11 48 8D 8D

• Replace it with:

EB 05 41 C6 46 3A 11 48 8D 8D

• Save the file. • This disables the internal save file integrity check temporarily.

4. Move the save files to the Director's Cut save location

• Navigate to: C:\Users<YourUsername>\AppData\Local\Koj imaProductions\

• There should be a subfolder with only numbers (e.g., 1234567890) - that's the correct save folder. • Paste your Epic Games save files there.

5. Launch the game in Offline Mode

• Disable your internet connection or launch Steam in offline mode. • Start Death Stranding: Director's Cut through Steam. • Load your save - it should now appear and work. (It will say that saves are corrupted but just press ok) • Then play for a while, and make a manual save inside the game.

6. Restore the original. exe file

• Close the game. • Replace the edited ds.exe with your original backup copy. • Reconnect to the internet and optionally re-enable Steam Cloud

So I figured it out myself and decided to share it for anyone who needs it. Disclaimer: This is not my original method

- I'm simply documenting and organizing what worked, based on scattered findings and personal testing.

All credit goes to those who originally discovered the steps. like Brutal Sam on YouTube
